You may apply for a better job with good benefits and high salary.

NEW QUESTION: 1

Your network contains an Active Directory domain named contoso.com. The domain contains a member server named Server1 that runs Windows Server 2016.

You install IP Address Management (IPAM) on Server1. You select the automatic provisioning method, and then you specify a prefix of IPAM1.

Which cmdlet should you run? To answer, select the appropriate options in the answer area.

Answer:

Explanation:

NEW QUESTION: 2

Which of the following strategies would increase overall supply chain risk?

- A. Identify multiple sources for a product that has a potential for supply chain disruption
- B. Outsourcing a product that is not well suited to your operations
- C. Single sourcing a product that makes the highest annual profit
- D. Internally manufacturing a product that has a high level of technical intellectual property

Answer: C

NEW QUESTION: 3

The operations team and the development team want a single place to view both operating system and application logs. How should you implement this using AWS services? Choose two from the options below

- A. Using AWS CloudFormation and configuration management, set up remote logging to send events via UDP packets to CloudTrail.
- B. Using AWS CloudFormation, create a Cloud Watch Logs LogGroup and send the operating system and application logs of interest using the Cloud Watch Logs Agent.
- C. Using configuration management, set up remote logging to send events to Amazon Kinesis and insert these into Amazon CloudSearch or Amazon Redshift, depending on available analytic tools.
- D. Using AWS CloudFormation, merge the application logs with the operating system logs, and use IAM Roles to allow both teams to have access to view console output from Amazon EC2.

Answer: B,C

Explanation:

Explanation

Option B is invalid because Cloudtrail is not designed specifically to take in UDP packets

Option D is invalid because there are already Cloudwatch logs available, so there is no need to have specific logs designed for this.

You can use Amazon CloudWatch Logs to monitor, store, and access your log files from Amazon Elastic

Compute Cloud (Amazon EC2) instances, AWS CloudTrail, and other sources. You can then retrieve the associated log data from CloudWatch Logs.

For more information on Cloudwatch logs please refer to the below link:
