**NEW QUESTION: 2**

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different

goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario.

You are a database administrator for a company that has on-premises Microsoft SQL Server environment. There are two domains in separate forests. There are no trust relationships between the domains. The environment hosts several customer databases, and each customer uses a dedicated instance running SQL Server 2016 Standard edition. The customer environments are shown in the following table.

End of repeated scenario.

You need to monitor WingDB and gather information for troubleshooting issues.

Which two tools should you use? Each correct answer presents a complete solution.

- A. sp\_monitor
- B. sys.dm\_tran\_active\_snapshot\_database\_transactions
- C. sp\_lock
- D. sys.dm\_tran\_locks
- E. Activity Monitor

**Answer: C,E**

Explanation:

The performance issues is related to locking.

B: sp\_lock reports snapshot information about locks, including the object ID, index ID, type of lock, and type or resource to which the lock applies.

D: The Activity Monitor in SQL Server Management Studio is useful for ad hoc views of current activity and graphically displays information about:

### **NEW QUESTION: 3**

During a new client assessment, an ACE certified Personal Trainer learns that the client takes a common beta blocker. Which side effect of this type of medication should the trainer be aware of?

- A. Increased heart rate
- B. Decreased sweat response
- C. Increased sweat response
- D. Decreased heart rate

**Answer: B**

### **NEW QUESTION: 4**

DRAG DROP

Your company network includes a single forest with multiple domains. You plan to migrate from On-Premises Exchange to Exchange Online.

You want to provision the On-Premises Windows Active Directory (AD) and Azure Active Directory (Azure AD) service

accounts.

You need to set the required permissions for the Azure AD service account.

Which settings should you use? To answer, drag the appropriate permission to the service account. Each permission may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

**Answer:**

Explanation:

Box 1: Enterprise Admin

Box 2: Global Admin

When you run the Directory Sync tool Configuration Wizard, you must provide the following information:

Enterprise admin credentials for the on-premises Active Directory schema

Global admin credentials for the Microsoft cloud service
