NEW QUESTION: 1

When using the Secure Multi-Tenancy feature on an EMC Data Domain, which action can a tenant administrator perform?

- A. Set capacity
- B. Monitor data capacity
- C. Set stream quota
- D. Report on tenant unit data

Answer: B

NEW QUESTION: 2

Which of the following is a valid command to create a new user in the system?

- A. `adduser`

- B. stratum 0
- C. stratum 15
- D. stratum 1

Answer: D

Explanation:

Explanation

The stratum levels define the distance from the reference clock. A

reference clock is a stratum 0 device that is assumed to be accurate and has little or no delay associated with it. Stratum 0 servers cannot be used on the network but they are directly connected to computers which then operate as stratum-1 servers. A stratum 1 time server acts as a primary network time standard.

A stratum 2 server is connected to the stratum 1 server; then a stratum 3 server is connected to the stratum 2 server and so on. A stratum 2 server gets its time via NTP packet requests from a stratum 1 server. A stratum 3 server gets its time via NTP packet requests from a stratum-2 server... A stratum server may also peer with other stratum servers at the same level to provide more stable and robust time for all devices in the peer group (for example a stratum 2 server can peer with other stratum 2 servers).

NTP uses the concept of a stratum to describe how many NTP hops away a

machine is from an authoritative time source. A stratum 1 time server

typically has an authoritative time source (such as a radio or atomic clock, or a Global Positioning System (GPS) time source) directly attached, a stratum 2 time server receives its time via NTP from a stratum 1 time server, and so on.

NEW QUESTION: 3

Which three settings must be configured to enable Credential Phishing Prevention? (Choose three.)

- A. enable User-ID
- B. enable App-ID
- C. define URL Filtering Profile
- D. validate credential submission detection
