v=vs.110).aspx Once an exception is thrown, part of the
information it carries is the stack trace. The stack trace is a
list of the method call hierarchy that starts with the method
that throws the exception and ends with the method that catches
the exception. If an exception is re-thrown by specifying the
exception in the throw statement, the stack trace is restarted
at the current method and the list of method calls between the
original method that threw the exception and the current method
is lost. To keep the original stack trace information with the
exception, use the throw statement without specifying the
exception.
