NEW QUESTION: 2

Ein Techniker stellt fest, dass ein neu installierter Dienst verhindert, dass ein Gerät unter Windows funktioniert. Welches der folgenden Tools sollte der Techniker verwenden, um zu verhindern, dass der Dienst beim Neustart des PCs geladen wird?

- A. Taskplaner
- B. MSINFO32
- C. Systemwiederherstellung
- D. MSConfig

Answer: D

NEW QUESTION: 3

You have a DHCP server named Server1. Server1 has one network adapter. Server1 is located on a subnet named Subnet1. Server1 has scope named Scope1. Scope1 contains IP addresses for the 192.168.1.0/24 network.

Your company is migrating the IP addresses on Subnet1 to use a network ID of 10.10.0.0/16.

On Server1, you create a scope named Scope2. Scope2 contains IP addresses for the 10.10.0.0/16 network.

You need to ensure that clients on Subnet1 can receive IP addresses from either scope.

What should you create on Server1?

- A. A split-scope
- B. A scope
- C. A superscope
- D. A multicast scope

Answer: C

Explanation:

A. Multicasting is the sending of network traffic to a group of endpoints destination hosts. Only those members in the group of endpoints hosts that are listening for the multicast traffic (the multicast group) process the multicast traffic

B. A scope is an administrative grouping of IP addresses for computers on a subnet that use the Dynamic Host Configuration Protocol (DHCP) service. The administrator first creates a scope for each physical subnet and then uses the scope to define the parameters used by clients.

C. A superscope is an administrative feature of Dynamic Host Configuration Protocol (DHCP) servers running Windows Server 2008 that you can create and manage by using the DHCP Microsoft Management Console (MMC) snap-in. By using a superscope, you can group multiple scopes as a single administrative entity.

D. <http://technet.microsoft.com/en-us/library/dd759152.aspx>
