NEW QUESTION: 1
You have created a script in the recovery catalog called backup_database.
Which of the following commands would successfully execute that script?

A. Option C
B. Option A
C. Option D
D. Option E
E. Option B
Answer: C
Explanation:
Explanation/Reference:
Explanation:
Use the EXECUTE SCRIPT command to run a stored script. If GLOBAL is specified, then a global script with this name must exist in the recovery catalog; otherwise, RMAN returns error RMAN-06004. If GLOBAL is not specified, then RMAN searches for a local stored script defined for the current target database. If no local script with this name is found, then RMAN searches for a global script by the same name and executes it if one is found.

NEW QUESTION: 2
You develop a gateway solution for a public facing news API. The news API back end is implemented as a RESTful service and hosted in an Azure App Service instance.
You need to configure back-end authentication for the API Management service instance.
Which target and gateway credential type should you use? To answer, drag the appropriate values to the correct parameters. Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.
NOTE: Each correct selection is worth one point.

Answer:
Explanation:
