Once we receive your email we will handle soon.

NEW QUESTION: 1

Multiple production workloads on an EMC Symmetrix array experience performance issues during the backup window. Even though backups are written to SATA devices and production workloads reside on EFD and FC devices, response times for the production hosts degrade during the backup window and quickly recover thereafter.

During the backup window, the Symmetrix is consistently approaching the system write pending limit. What is the best way to provide predictable and controlled service levels for the production workloads?

- A. Create a static Dynamic Cache Partition for the production workloads
- B. Create a flexible Dynamic Cache Partition for the backup

workload

C. Create a flexible Dynamic Cache Partition for the production workloads

D. Create a static Dynamic Cache Partition for the backup workload

Answer: D

NEW QUESTION: 2

SQL Server Agent service startup account defines the Microsoft Windows account in which SQL Server Agent runs and its network permissions. SQL Server Agent runs as a specified user account. You select an account for the SQL Server Agent service by using SQL Server Configuration Manager, where you can choose from the following options:

Answer:

Explanation:

Explanation

Box 1: Domain Account

The service startup account defines the Microsoft Windows account in which SQL Server Agent runs and its network permissions. SQL Server Agent runs as a specified user account. You select an account for the SQL Server Agent service by using SQL Server Configuration Manager, where you can choose from the following options:

- * Built-in account. You can choose from a list of the following built-in Windows service accounts: Local System account.

- * This account. Lets you specify the Windows domain account in which the SQL Server Agent service runs.

Box2: Domain users

Microsoft recommends choosing a Windows user account that is not a member of the Windows Administrators group.

Box 3: Managed Service Accounts

When resources external to the SQL Server computer are needed, Microsoft recommends using a Managed Service Account (MSA), configured with the minimum privileges necessary.

Note: A Managed Service Account (MSA) can run services on a computer in a secure and easy to maintain manner, while maintaining the capability to connect to network resources as a specific user principal.
