#### **NEW QUESTION: 1**

Your network contains a server named Server1. You open Reliability Monitor as shown in the exhibit. (Click the Exhibit button.)

You need to ensure that Reliability Monitor collects and displays information.

Which two tasks should you perform? (Each correct answer presents part of the solution. Choose two.)

- A.** Modify the HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\Microsoft\Reliability Analysis\WMI\WMIEnable registry value.
- B.** Start the System Diagnostics Data Collector Set.
- C.** Modify the RacTask scheduled task.
- D.** Start the System Performance Data Collector Set.
- E.** Configure an event viewer subscription.

**Answer: A,C**

Explanation:

Issue: When you open Reliability Monitor on a computer that is running Windows Server 2008 or Windows Server 2008 R2, Reliability Monitor displays no information.

Cause: This behavior occurs because the trigger that regularly starts the RacTask task is disabled. Information that Reliability Monitor displays is provided by the RacTask task. By default, the RacTask task runs one time that is about one hour after you install the operating system. In Windows Server 2008 and in Windows Server 2008 R2, the trigger that regularly starts the RacTask task is disabled after the RacTask task runs for the first time.

Solution:

To resolve this issue, follow these steps:

---

Click Start, type Task Scheduler in the Search box, and then click Task Scheduler.

Enable the trigger that regularly starts the RacTask task.

Update a registry setting.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\Reliability  
Analysis\WMI\WMIEnable

-  
Restart the computer.

Note:

\* Reliability Monitor uses data provided by the RACAgent scheduled task. Reliability Monitor will start displaying a Stability Index rating and specific event information 24 hours after system installation. The RACAgent scheduled task runs by default after the operating system is installed. If it is disabled, it must be enabled manually from the Task Scheduler snap-in for Microsoft Management Console (MMC).

Reference: Reliability Monitor displays no information in Windows Server 2008 and in Windows Server 2008 R2

## **NEW QUESTION: 2**

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets stated goals.

You manage a Microsoft SQL Server environment with several databases.

You need to ensure that queries use statistical data and do not initialize values for local variables.

Solution: You enable the LEGACY\_CARDINALITY\_ESTIMATION option for the databases.

Does the solution meet the goal?

A. No

B. Yes

**Answer: A**

Explanation:

Explanation/Reference:

LEGACY\_CARDINALITY\_ESTIMATION = { ON | OFF | PRIMARY }

Enables you to set the query optimizer cardinality estimation model to the SQL Server 2012 and earlier version independent of the compatibility level of the database. This is equivalent to Trace Flag 9481.
