NEW QUESTION: 1

Which three operations can the PUBLIC user with the SYSOPER privilege perform?

- A. ALTER DATABASE RECOVER
- B. SHUTDOWN
- C. DROP DATABASE
- D. CREATE DATABASE

E. STARTUP

Answer: A,B,E

Explanation:

Explanation/Reference:

References:

NEW QUESTION: 2

Note: This question is part of a series of questions that present the same scenario. Each question on the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You manage an Azure SQL Database. The database has weekly backups that are stored in an Azure Recovery Services vault. A company deploys Microsoft SQL Server on an Azure Standard_DS3 virtual machine (VM). You need to modify the disk caching policy.

Which Azure PowerShell cmdlet should you run?

- A. Update-Disk
- B. Update-AzureDisk
- C. Set-AzureRmVmDataDisk
- D. Set-AzureRmVmOperatingSystem

Answer: C

Explanation:

Explanation/Reference:

Explanation:

Example 1: Modify the caching mode of a data disk

```
PS C:\> $VM = Get-AzureRMVM -ResourceGroupName
```

```
"ResourceGroup11" -VMName "ContosoVM07" PS C:\>
```

```
Set-AzureRmVmDataDisk -VM $VM -Name "DataDisk01" -Caching
```

```
ReadWrite | Update- AzureRmVM
```

The first command gets the virtual machine named ContosoVM07 by using Get-AzureRmVM. The command stores it in the \$VM variable. The second command modifies the caching mode for the data disk named DataDisk01 on the virtual machine in \$VM. The command passes the result to the Update- AzureRmVM cmdlet, which implements your changes. A change to the caching mode causes the virtual machine to restart.
