Firstly you need to choose a right study material which will save you [EX427](#) lots of money and energy, Dear, if you have bought our Red Hat Certified Specialist in Business Process Design exam certkingdom braindumps, one year free update is available for you.

**NEW QUESTION: 1**

Which of the following are the two commonly defined types of covert channels:

- A. Storage and Kernel
- B. Storage and Timing
- C. Kernel and Timing
- D. Software and Timing

**Answer: B**

Explanation:

A covert storage channel involves direct or indirect reading of a storage location by another process. A covert timing channel depends upon being

able to influence the rate that some other process is able to acquire resources, such as the CPU. A covert storage channel is a "covert channel that involves the direct or indirect writing of a storage location by one process and the direct or indirect reading of the storage location by another process. Covert storage channels typically involve a finite resource (e.g. sectors on a disk) that is shared by two subjects at different security levels. A covert timing channel is a "covert channel in which one process signals information to another by modulating its own use of system resources (e.g. CPU time) in such a way that this manipulation affects the real response time observed by the second process
