NEW QUESTION: 1

- A. Option C
- B. Option A
- C. Option D
- D. Option B

Answer: C

NEW QUESTION: 2

John works as a Network Administrator for Net Perfect Inc. The company has a Windows-based network. The company uses Check Point SmartDefense to provide security to the network of the company. On the HTTP servers of the company, John defines a rule for dropping any kind of userdefined URLs. Which of the following types of attacks can be prevented by dropping the

user-defined URLs?

- A. Morris worm
- B. Hybrid attacks
- C. PTC worms and mutations
- D. Code red worm

Answer: C

NEW QUESTION: 3

You manage an application running on Azure Web Sites Standard tier. The application uses a substantial amount of large image files and is used by people around the world.

Users from Europe report that the load time of the site is slow.

You need to implement a solution by using Azure services.

What should you do?

- A. Configure Azure blob storage with a custom domain.
- B. Configure Azure CDN to cache all responses from the application web endpoint.
- C. Configure Azure CDN to cache site images and content stored in Azure blob storage.
- D. Configure Azure Web Site auto-scaling to increase instances at high load.

Answer: A

Explanation:

You can configure a custom domain for accessing blob data in your Azure storage account. The default endpoint for the Blob service is

<https://<mystorageaccount>.blob.core.windows.net>. If you map a custom domain and subdomain such as www.contoso.com to the blob endpoint for your storage account, then

your users can also access blob data in your storage account using that domain. Reference: Configure a custom domain name for blob data in an Azure storage account URL:

<http://azure.microsoft.com/en-us/documentation/articles/storage-custom-domainname/>
