**NEW QUESTION: 1**

You are authoring unit tests.

The unit tests must test code that consumes sealed classes.

You need to create, maintain, and inject dependencies in the unit tests.

Which isolation method should you use?

- A. Shim types
- B. T4 text templates and code generation
- C. Hard-coded implementation
- D. Stub types

**Answer: A**

Explanation:

Explanation/Reference:

Explanation:

Shim types are one of two technologies that the Microsoft Fakes Framework uses to let you easily isolate components under test from the environment. Shims divert calls to specific methods to code that you write as part of your test. Many methods return different results dependent on external conditions, but a shim is under the control of your test and can return consistent results at every call. This makes your tests much easier to write.
