Opportunity is won by a Sales Rep. Recently the trigger is
creating two orders. What is the optimal method for a developer
to troubleshoot this?
A. Turn off all Workflow Rules, then turn them on one at at
time to see which one causes the error.
B. Run the Apex Test Classes for the Apex trigger to ensure the
code still has sufficient code coverage.
C. add system.debug() statements to the code and use the
Developer Console logs to trace the code.
D. Set up debug logging for every Sales Rep, then monitor the
logs for errors and exceptions.
Answer: C

NEW QUESTION: 2
A company is developing a mobile app for field service employees using Azure App Service Mobile Apps as the backend. The company's network connectivity varies throughout the day. The solution must support offline use and synchronize changes in the background when the app is online app.
You need to implement the solution.
How should you complete the code segment? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer:
Explanation:
Explanation

Box 1: var todoTable = client GetSyncTable<TodoItem>()
To setup offline access, when connecting to your mobile service, use the method GetSyncTable instead of GetTable (example):
IMobileServiceSyncTable todoTable = App.MobileService.GetSyncTable(); / Box 2: await todoTable.PullAsync("allTodoItems",todo.Table.CreateQuery());
Your app should now use IMobileServiceSyncTable (instead of IMobileServiceTable) for CRUD operations.
This will save changes to the local database and also keep a log of the changes. When the app is ready to synchronize its changes with the Mobile Service, use the methods PushAsync and PullAsync (example):
await App.MobileService.SyncContext.PushAsync();
await todoTable.PullAsync();
