<https://docs.oracle.com/en/cloud/paas/iot-cloud/iotgs/understanding-analytics-processors.html> he type of analytics processor to use depends on the nature of your data:

* Streaming Analytics Processors

Use streaming analytics processors to analyze high volumes of rapidly changing data streamed from your sensors and devices. Streaming analytics processors are continuously running from the moment you deploy them, waiting for your devices to stream data.

See Creating Streaming Analytics Processors.

* Batch Analytics Processors

Use batch analytics processors to analyze large volumes of batch data. Typically, batch analytics processors process data

stored in the Oracle NoSQL or other data sources. Unlike streaming analytics processors they are not continuously running, they only run when you call them using the REST API they expose.
