NEW QUESTION: 2

Leveraging the information supplied below, complete the CSR for the server to set up TLS (HTTPS)

- * Hostname: ws01
- * Domain: comptia.org
- * IPv4: 10.1.9.50
- * IPV4: 10.2.10.50
- * Root: home.aspx
- * DNS CNAME:homesite.

Instructions:

Drag the various data points to the correct locations within the CSR. Extension criteria belong in the left hand column and values belong in the corresponding row in the right hand column.

Answer:

Explanation:

NEW QUESTION: 3

You need to recommend a solution that manages the security events. The solution must meet the technical requirements. Which configuration should you include in the recommendation?

- A. Object access auditing by using a Group Policy object (GPO)
- B. Event forwarding by using Event Viewer
- C. Event rules by using System Center 2012 Operations Manager
- D. Audit Collection Services (ACS) by using System Center 2012

Answer: D

Explanation:

Testlet 1

Overview

Contoso, Ltd., is a recruiting and staffing company that has offices throughout North America.

The company has a main office and six branch offices. The main office is located in Miami. The branch offices are located in New York, Seattle, Los Angeles, Montreal, Toronto, and Vancouver.

Existing Environment

Network Infrastructure

The network contains one Active Directory domain named contoso.com.

The main office has the following servers:

One file server that maintains multiples shares

Two domain controllers configured as DNS servers

One Windows Server Update Services (WSUS) server

Two DHCP servers that each have a scope for all of the subnets

Two servers that have Failover Clustering configured and are used as virtualization hosts

One server that has Microsoft SQL Server 2012 installed and maintains a customer relationship

management (CRM) database

Each branch office has the following servers:

One domain controller configured as a DNS server

One DHCP server that has a single scope for its respective office

Each office has a single subnet. The network speed of the local area network (LAN) is 1 gigabit per second. All of the offices have a high-speed connection to the Internet. The offices connect to each other by using VPN appliances.

Current Issues

Users report that it can take a long time to download files from network shares in the main office.

A root cause analysis identifies that network traffic peaks when the users experience this issue.

Requirements

Planned Changes

The company plans to implement the following changes:

Replace all of the domain controllers with new servers that run Windows Server 2012.

Upgrade the CRM application to use a web-based application that connects to the current CRM

database. The web application will store session data in the memory of each web server.

Initially, deploy two front-end web servers to two virtual machines. Additional virtual web servers will be

deployed in the future.

Monitor the availability of the CRM application and create alerts when the overall availability is less than

99 percent.

Implement Microsoft System Center 2012 to manage the new environment.

Business Requirements

The company identifies the following business requirements:

Minimize hardware costs and software costs whenever possible.

Minimize the amount of network traffic over the VPN whenever possible.

Ensure that the users in the branch offices can access files currently on the main office file server if an

Internet link fails.

Technical Requirements

The company identifies the following technical requirements:

Provide a highly available DHCP solution.

Maintain a central database that contains the security events from all of the servers. The database

must be encrypted.

Ensure that an administrator in the main office can manage the approval of Windows updates and

updates to third-party applications for all of the users.

Ensure that all of the domain controllers have the ReliableTimeSource registry value in

HKEY_LOCAL_MACHINE

\SYSTEM\CurrentControlSet\Services\W32Time\Parameters set to 1, even if an administrator changes that value manually.

Virtualization Requirements

The company identifies the following virtualization

requirements:

Minimize the number of permissions and privileges assigned to users.

Ensure that the members of a group named Group2 can add a WSUS server to the fabric.

Ensure that a diagram view of the virtualization environment can be generated dynamically.

Minimize the amount of administrative effort required to manage the virtualization environment.

Prevent the failure of a front-end web server from affecting the availability of the CRM application.

Ensure that the members of a group named Group1 can create new virtual machines in the Los

Angeles office only.

Only create virtual machine templates by using objects that already exist in the System Center 2012

Virtual Machine Manager (VMM) library.

On the failover cluster in the main office, apply limited distribution release (LDR) updates to the

virtualization hosts without disrupting the virtual machines hosted on the virtualization hosts.

NEW QUESTION: 4

Which advantage is gained from engaging with senior IT and LoB leadership of the Cisco Business Architecture approach?

- A. to gain an understanding of their business
- B. to position technology
- C. to describe the latest product features offered
- D. to demonstrate the latest product features

Answer: A
