You can have the updated OGB-001 from Everbrasil braindump and the OGB-001 updated testing engine as soon as you make your payment on the site, Firstly, you will have a greater chance than other people to find a good job.

Confronting obstacles or bottleneck during your process of reviewing, our OGB-001 practice materials will fix all problems of the exam and increase your possibility of getting dream opportunities dramatically.

We offer you free demo for OGB-001 exam braindumps, and we recommend you have a try before buying, We hypothesize that you fail the exam after using our OGB-001 learning engine we can switch other versions for you or give back full refund.

If you want to get the related certification in an efficient method, please choose the OGB-001 study materials from our company, The product we provide with you is compiled by professionals elaborately and boosts varied versions which aimed to help you learn the OGB-001 study materials by the method which is convenient for you.

Our OGB-001 guide torrent: TOGAF Business Architecture Part 1 expect to help you get the exam certification with scientific method, We devote ourselves to helping you pass exam, the numerous customers we have also prove that we are trustworthy.

With the development of scientific and technological progress, being qualified by some certifications plays an increasingly important role in our life, OGB-001 - TOGAF Business Architecture Part 1 Exam.

Everbrasil OGB-001 - A lot of people who participate in the IT professional certification exam was to use Everbrasil's practice questions and answers to pass the exam, so Everbrasil got a high reputation in the IT industry.

NEW QUESTION: 1

Which Develop Schedule tool and technique produces a theoretical early start date and late start date?

A. Schedule comparison bar charts

- B. Variance analysis
- C. Schedule compression
- D. Critical path method

Answer: D

Explanation:

Explanation:

6.6.2.2 Critical Path Method

The critical path method, which is a method used to estimate the minimum project duration and determine the amount of scheduling flexibility on the logical network paths within the schedule model. This schedule network analysis technique calculates the early start, early finish, late start, and late finish dates for all activities without regard for any resource limitations by performing a forward and backward pass analysis through the schedule network, as shown in Figure 6-18. In this example the longest path includes activities A, C, and D, and, therefore, the sequence of A-C-D is the critical path. The critical path is the sequence of activities that represents the longest path through a project, which determines the shortest possible project duration. The resulting early and late start and finish dates are not necessarily the project schedule, rather they indicate the time periods within which the activity could be executed, using the parameters entered in the schedule model for activity durations, logical relationships, leads, lags, and other known constraints.

The critical path method is used to calculate the amount of scheduling flexibility on the logical network paths within the schedule model.

On any network path, the schedule flexibility is measured by the amount of time that a schedule activity can be delayed or extended from its early start date without delaying the project finish date or violating a schedule constraint, and is termed "total float." A CPM critical path is normally characterized by zero total float on the critical path. As implemented with PDM sequencing, critical paths may have positive, zero, or negative total float depending on constraints applied. Any activity on the critical path is called a critical path activity. Positive total float is caused when the backward pass is calculated from a schedule constraint that is later than the early finish date that has been calculated during forward pass calculation. Negative total float is caused when a constraint on the late dates is violated by duration and logic. Schedule networks may have multiple near-critical paths.

Process: 6.6 Develop Schedule

Definition: The process of analyzing activity sequences, durations, resource requirements, and schedule constraints to create the project schedule model.

Key Benefit: The key benefit of this process is that by entering schedule activities, durations, resources, resource availabilities, and logical relationships into the scheduling tool, it generates a schedule model with planned dates for completing project activities.

Inputs

1. Schedule management plan
2. Activity list
3. Activity attributes
4. Project schedule network diagrams
5. Activity resource requirements
6. Resource calendars
7. Activity duration estimates
8. Project scope statement
9. Risk register
10. Project staff assignments
11. Resource breakdown structure
12. Enterprise environmental factors
13. Organizational process assets

Tools & Techniques

1. Schedule network analysis
2. Critical path method
3. Critical chain method
4. Resource optimization techniques
5. Modeling techniques
6. Leads and lags
7. Schedule compression
8. Scheduling tool

Outputs

1. Schedule baseline
2. Project schedule
3. Schedule data
4. Project calendars
5. Project management plan updates
6. Project documents updates

NEW QUESTION: 3

How would you grant the RVPC user access to specific RMAN database records in the RMAN virtual private catalog?

- A. Issue the grant command from the SYS user (or equivalent) of the target database.
- B. Issue the grant command from the recovery catalog-owning schema user account in the recovery catalog.
- C. Issue the grant command from the SYS user (or equivalent) of the recovery-catalog database.
- D. Issue the grant command from RMAN when connected to the recovery catalog-owning schema.
- E. Issue the grant command from RMAN when connected to the target database.

Answer: D

NEW QUESTION: 4

In a SQLScript calculation view, one table variable contains the records that are the result of a SELECT: statement from a database table with 10 fields. You want to use this table variable to populate a new table variable with the same result set, which is restricted to 1 of the 10 fields. Which CE function do you use?

- A. CE_UNION
- B. CE_PROJECTION
- C. CE_COLUMN_TABLE
- D. CE_CALC

Answer: B
