NEW QUESTION: 4
Oracle Grid Infrastructure for a stand-alone server is
installed on your production host before installing the
Oracle Database server. The database and listener are
configured by using Oracle Restart.
Examine the following command and its output:
$ crsctl config has
CRS-4622: Oracle High Availability Services auto start is
enabled.
What does this imply?
A. When you create a database service by modifying the
SERVICE_NAMES initialization parameter, it is
automatically added to the Oracle Restart configuration.
B. When you start an instance on a high with SQL *Plus
dependent listeners and ASM disk groups are
automatically started.
C. When a database is created by using SQL* Plus, it is
automatically added to the Oracle Restart
configuration.
D. When a database instance is started by using the SRVCTL
utility and listener startup fails, the instance
is still started.
Answer: D
Explanation:

Explanation:
About Startup Dependencies
Oracle Restart ensures that Oracle components are started in
the proper order, in accordance with
component dependencies. For example, if database files are

stored in Oracle ASM disk groups, then
before starting the database instance, Oracle Restart ensures
that the Oracle ASM instance is started and
the required disk groups are mounted. Likewise, if a component
must be shut down, Oracle Restart
ensures that dependent components are cleanly shut down first.
Oracle Restart also manages the weak dependency between
database instances and the Oracle Net
listener (the listener): When a database instance is started,
Oracle Restart attempts to start the listener. If
the listener startup fails, then the database is still started.
If the listener later fails, Oracle Restart does not
shut down and restart any database instances.
